

# RadarEye active view system

## RadarEye

An integrated active view system for commercial vehicles designed to detect and see objects in zones obscured from the operators view. Detects stationary and moving objects.

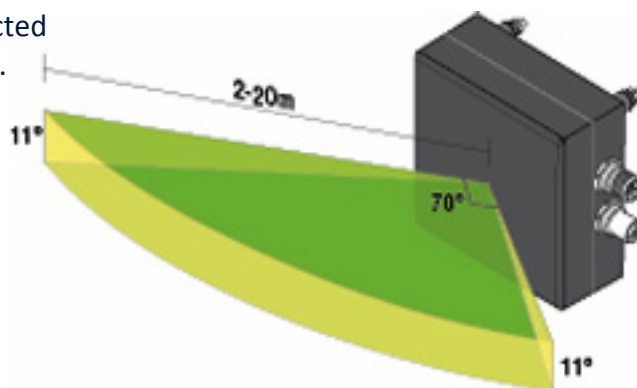

## Two Safety Systems One monitor

With this active view system the operator is actively warned with audible tones that increase in rate as objects come closer. When an object or person is detected this can be seen on the reverse camera monitor and the operator can respond. RadarEye is capable of visualizing the radar zones on the monitor. As soon as a person enters the zone it will activate a transparent visualization to make the driver aware of the potential danger.

**Three** systems in one with auto reverse break option.

### Detection

Only objects in the zone will be detected the zone is set the vehicle width only. 2-20m detection area divided into 5 equal segments. Obstacle reaction delay 50ms.
