

Bluetooth display

Truck-Tech UK

On-board weighing - load management systems

With the app it's easier than ever to monitor your loads and vehicle weights.

Digital – Air Suspension system.

The Bluetooth enabled displays for air suspension are designed for use on any tractor, trailer, or rigid truck with air suspension. After both an empty and loaded calibration has been performed at a certified ground scale, the gauge will reliably display the on-the-ground axle group weight. The displays can also be used on tractor trailer combinations. Versions are available with one or two air sensors to accommodate axle groups with either one or two height control valves.

Avoid potential axle overloads:

Monitor loads in tankers:

Monitor combined tractor and trailer loads.

Mechanical suspension options:

Display your weights on your Android or iOS device in real time; download the free app on Google Play and the App Store.
